

Asbestos Services

Management Support for Schools

It is estimated that over 85% of Schools in England* contain at least one asbestos product in the building fabric.

Here at IDOM, we believe that a School needs to be in a position where asbestos is located, assessed and continually diligently managed.

What do you need to do?

If you are the Duty Holder you need to have an assessment in place that clearly identifies where asbestos is, it's condition, type, extent, probability of disturbance and likelihood of exposure. This needs to be documented in such a way that the information is readily understandable, available and clear what the potential dangers are and what emergency procedures are required if disturbed. It also has to be up to date to be compliant.

IDOM can assist the Duty Holder in the process of compliance by:

- Assessing current information held for compliance
- Conducting relevant assessment surveys to locate, assess and inform
- Provide a management document for onward compliance
- Provide training for those who need to know
- Periodically carry out condition inspections in line with HSE guidance
- Assess maintenance requirements, refurbishment or demolition projects for further invasive surveys
- Write specifications for the safe removal of asbestos
- Manage the removal process, certificate and update the register

IDOM is renowned for excellence in finding the balance between managing expenditure and ensuring exceptional technical expertise in order to deliver the best service to clients in achieving compliance.

When you engage IDOM to carry out this work, you are assured of receiving an independent consultation and service which can avoid many potential future liabilities. Our experienced in-house consultants detailed approach is focussed upon providing the school with a comprehensive package that assures all parties that asbestos is being managed in a competent manner.
